2017 CERTIFICATION VED-WATER SUPPLY

Consumer Confidence Report (COM) JUN 26 AM 10: 04

Public Water System N	Name
List PWS ID #s for all Community Water Sy	stems included in this CCR
The Federal Safe Drinking Water Act (SDWA) requires each Community a Consumer Confidence Report (CCR) to its customers each year. Dependent be mailed or delivered to the customers, published in a newspaper request. Make sure you follow the proper procedures when distributing mail, a copy of the CCR and Certification to the MSDH. Please check	ending on the population served by the PWS, this CCR of local circulation, or provided to the customers upon the CCR. You must email, fax (but not preferred) or
Customers were informed of availability of CCR by: (Attach	copy of publication, water bill or other)
☐ Advertisement in local paper (Attach cop	oy of advertisement)
☐ On water bills (Attach copy of bill)	
☐ Email message (Email the message to the	e address below)
Other	
Date(s) customers were informed:/ /2018	/ /2018 / /2018
CCR was distributed by U.S. Postal Service or other direction methods used Date Mailed/Distributed: (Email MSDH a copy)	Date Emailed: / /2018
□ As a URL	(Provide Direct URL)
☐ As an attachment	
☐ As text within the body of the email mess	age
CCR was published in local newspaper. (Attach copy of publi	shed CCR <u>or</u> proof of publication)
Name of Newspaper:	
Date Published:/_/	
CCR was posted in public places. (Attach list of locations)	Date Posted: / / 2018
CCR was posted on a publicly accessible internet site at the fo	llowing address:
	(Provide Direct URL)
CERTIFICATION I hereby certify that the CCR has been distributed to the customers of this above and that I used distribution methods allowed by the SDWA. I further and correct and is consistent with the water quality monitoring data provided to of Health, Bureau of Public Water Supply	certify that the information included in this CCR is true
Name/Title (President, Mayor, Owner, etc.)	Date
Submission options (Select one m	pethod ONLY)
Mail: (U.S. Postal Service) MSDH, Bureau of Public Water Supply P.O. Box 1700 Jackson, MS 39215	Email: water.reports@msdh.ms.gov Fax: (601) 576 - 7800 **Not a preferred method due to poor clarity**

CCR Deadline to MSDH & Customers by July 1, 2018!

Copy of 2017 Drinking Water Quality Report The Woods PWS 0240258

Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Our drinking water supply is from the Pascagoula Aquifer.

Source water assessment and its availability

The source water assessment prepared by the DEQ lists our water supply as lower in susceptibility to contamination. This report is available in the office.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that

water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity:

microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved?

If you have any questions regarding your drinking water supply, Please contact Lyman Well at 228-832-3193

Description of Water Treatment Process

Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Woods is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or

cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

	MCLG	MCL,	Detect In	Ra	nge			
Contaminants	or MRDLG	TT, or MRDL	Your Water	Low	High	Sample Date	Violation	Typical Source
Disinfectants & Disi	nfection B	y-Produc	ets					
(There is convincing	evidence th	at additic	n of a di	sinfec	tant is	necessar	y for contro	ol of microbial contaminants)
Chlorine (as Cl2) (ppm)	4	4	.9	7	1	2017	No	Water additive used to control microbes
Haloacetic Acids (HAA5) (ppb)	NA	60	6	NA	NA	2017	No	By-product of drinking water chlorination
TTHMs [Total Trihalomethanes] (ppb)	NA	80	9.1	NA	NA	2017	No	By-product of drinking water disinfection
Inorganic Contaminants								
Barium (ppm)	2	2	.0108	NA	NA	2015	No	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits

0			Detec	t Ra	nge			
Contaminants	MCLG or MRDLG	MCL, TT, or MRDI	Your		High	Sample Date	Violation	Typical Source
Chromium (ppb)	100	100	.9	NA	NA	2015	No	Discharge from steel and pulp mills; Erosion of natural deposits
Cyanide (ppb)	200	200	15	NA	NA	2014	No	Discharge from plastic and fertilizer factories; Discharge from steel/metal factories
Fluoride (ppm)	4	4	.424	NA	NA	2015	No	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
Radioactive Contami	inants							
Alpha emitters (pCi/L)	0	15	.8	NA	NA	2012	No	Erosion of natural deposits
Contaminants	MCL	G AL	Your Water	Sample Date	Exc	mples eeding AL	Exceeds AL	Typical Source
Inorganic Contamina	nts							
Copper - action level a consumer taps (ppm)	1.3	1.3	.3	2017		0	No	Corrosion of household plumbing systems; Erosion of natural deposits

nit Descriptions					
Term	Definition				
ppm	ppm: parts per million, or milligrams per liter (mg/L)				
ppb	ppb: parts per billion, or micrograms per liter (μg/L)				
pCi/L	pCi/L: picocuries per liter (a measure of radioactivity)				
NA	NA: not applicable				
ND	ND: Not detected				
NR	NR: Monitoring not required, but recommended.				

Important Dr	nportant Drinking Water Definitions					
Term	Definition					
MCLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.					
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.					
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.					

Important Drinking Water Definitions					
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.				
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.				
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.				
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.				
MNR	MNR: Monitored Not Regulated				
MPL	MPL: State Assigned Maximum Permissible Level
